

# SpiderLearn

*“The SpiderLearn Method is not a mere learning and examination application, but a powerful tool for savings and prestige, with minimal costs and maximum reliability and flexibility”*

**Target:** Companies and Public organizations that must periodically check the level of their employees in certain fields, or decide which applicants to enter the company may be accepted

**Technology:** Online web application, either in the cloud, standard or on-premise

**Minimum requirements:** Any operating system and hardware that allows operating with the usual web browsers, both on the user side and on the server side

## How we can help your company to certify the knowledge of your employees (current or potential)

There are a large number of companies and public organizations that must face the challenge of maintaining a good level of training.

The price is always relevant, both for the application or module, the hardware / software and the maintenance.

It's not just about evaluating your knowledge against the current needs of your job, but about finding out who are the best candidates for new positions that require new approaches and attitudes.

**Continuous training** is key to staying on the front line, and it is not enough for employees to try to stay up to date, it must be facilitated and quantified.

## Operation

Candidates to be examined using SpiderLearn will be able to train thanks to the fact that part of the pool of questions and answers for each topic is dedicated to this purpose. An applicant may take as many training exams as he wishes.

When the assigned examiner and the applicant agree, the examination will be carried out in person (at a company headquarters), which may be face-to-face or online. In the latter case, with the help of a **webcam** with which the examiner will take random photographs of the examinee, avoiding any cheating.

All exams are **randomly** generated from the **pool** of available questions. In the case of the written exam (either in the classroom or remote with webcam) the examiner can change some questions.

In the event that the client prefers the face-to-face exam option, the examiner will proceed to select and print the exams at the time, with an interesting feature: it will generate a minimum of 4 series of exams, each one with different questions. The students will receive the exams in such a way that none of them will have the same questions as any of their neighbors, so **it will not be possible for them to copy each other**.

At the end of the exam, it will be scanned and uploaded to the

exam file, so that later the digitizers can carry out their work.

Multiple choice questions will be automatically evaluated, while those written must be corrected and evaluated by the corresponding specialist.

The administrators of the application can access statistics that control the evolution of both specialists and examinees.

The master tables -such as the question and answer lists of a specific topic- can be exported to Excel for a more comfortable manual treatment, to later import them already updated.

The application operates with speed, comfort, usability, security and reliability.

Access is private (**BackOffice**), so that only authorized users can access.

It is very **easy to use** for data entry and digitizers, but also for specialists and the administrator.

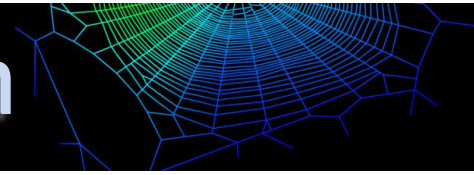

## Specialists in each field are the key to success

They are the ones who decide the exam questions, and they will be

Según se viene y siempre y cuando se cumplan las condiciones entonces 0'7

5. Para qué es útil el PHAD?  
Para explicar insuficiencia 0'4

Fecha: 17-1-2019 Firma: José Pérez pg 1 de 2

## With hardly any geographic restrictions

Any of the users can work with SpiderLearn from anywhere in the world - they only need an Internet connection - with the exception of:

- Applicants to be examined: must appear at the headquarters of the company where they are to be examined
- The examiners: they must appear when it is a face-to-face exam in the classroom.

It should be noted that the examiner who manages the initial stage of selecting candidates to be examined does not have to coincide with the one who goes to the classroom to deliver the written exams or remotely control the exam via webcam.

## Online exams for applicants allow them to train

Apart from the reference material that is proposed to the applicants and the alternative means of learning available to them (courses based on Moodle, Khan Academy, etc.), by regularly accessing the online training exams it also allows the examiner to go monitoring its evolution.

Examiners can list applicants by filtering all those who have passed the **cut-off mark**, observing their access frequency, improvements, etc.

## Benefits

It allows you to implement and distribute new advances, products, new regulations, technological advances and methodologies at an optimal cost and efficiently.

## Possible fields of application

There are many ways SpiderLearn can help:

- Corporations that wish to enhance the capabilities of existing staff, or choose the best applicants to be part of them
- SMEs
- Public organizations

Regarding the possible topics to learn and evaluate:

- Keep employees up to date on legislation: RGPD, Accessibility, Occupational Risks, respect for the female group and LGTBIQA, etc.
- Allow employees to add more value to the company. Thus, they themselves can suggest in which aspects there can be improvements, assigning the necessary training and, finally, evaluating them.

the proofreaders, offering **prestige** and **reliability** to the method.

The examinees will be able to communicate with the specialists in case they consider that any answer is erroneous or poorly evaluated.

The specialists must keep the questions and answers **up to date**, both in **legal** and **technological** aspects.

For each topic, they must reserve a specific part of the questions for the face-to-face exams; these questions will not appear in the online training exams.

Several specialists can treat the same topic.

Except in the case of specialists, for the rest of the profiles it is not necessary for users to have a high qualification, they must only be orderly and constant users.

It should be noted that, although the creation and editing of questions and answers is a matter for specialists, DigitalWiz can help in the transformation and import of Office documents (Word, Excel, PDF, etc.), even if they were thousands of files.
